

Appl. No.: 10/660,989
Amdt. Dated: 02/17/2006
Off. Act. Dated: 12/14/2005

Amendments to the Specification:

spw
3/21/7
0012
[0013] Please replace paragraph [0013] with the following amended paragraph:

0012
[0013] Furthermore, in order to support a generator on the top of a base tank, there must be a support structure extending from the equipment pad, to the mounts of the generator on the tank. For example, U.S. Pat. Nos. 6,026,975, 6,257,437 and 6,349,873 to Slater, incorporated herein by reference, disclose stiffening members for the top and bottom walls of the inner tank, top and side walls of the outer tank, and support beams along the top outer tank wall. These stiffening members provide support for the generator, however this external support configuration adds significant weight and size to the tank system and can interfere with generator maintenance access. ~~However, none of the patents referenced above suggest the use of baffles in the inner tank as a means of support for the generator.~~
